DETAILED ACTION

Response to Appeal Brief

1. In response to Board decision is reversed, filed on 9/18/09 the rejection of claims 1- 25 is withdrawn.

Information Disclosure Statement

2. The information disclosure statement (IDS) submitted on 7/9/07, has been considered by the examiner.

Reason For Allowance

3. The following is an examiner's statement of reasons for allowance:

Claims 1 – 25, are allowed.

In response to arguments filed by board decision filed on 9/18/09 are persuasive. The prior art of record Alderson (US.6,973,218 B2), reference shows block diagram for processing image data of particular note are blocks 516 and 518. Block 516 applies noise filtering to provide a noise- filtered image. Thus, block 518 displays the noise filtered image data can then be displayed on a display device. Alderson fails to show "displaying where the filtering is being performed on the received image data". Tan (US.6,697, 534 B1) reference teaches that employing human judgment to adjust the sharpness of an image or series of images is frequently not practical or desirable. Tan fails to show " converting a control signal used in the filtering to a video signal" "displaying an image representative of the video signal ; wherein the displayed image indicates where the image data is being filtered" (as recited in claim 8), " converting the

at least one filter control signal to a video signal" and "displaying an image representative of the video signal" (as recited in claim 17), "a video converter for converting at least one control signal of the filter to a video signal; and a display for showing an image representative of the video signal" (as recited in claim 19), "a filter preview element for providing a video signal representative of the control signal within the video processing element; and a display for showing an image representative of the video signal, wherein the image provides a visual indication of where noise is being removed from the image data (as recited by claim 21), "a video converter for converting the filter control signal to a video signal ; and a display for showing an image representative of the video signal"(as recited by claim 22), "enabling selection of one of a number of display modes ... wherein at least one of the number of display modes is associated with displaying where filtering of noise in the image data is occurring"(as recited by claim 25), as commonly included in each of the independent claim 1, 8, 17, 19, 21, 22 and 25 the prior art of record fails to teach either singularly or in combination, fails to anticipate or render the above limitations obvious.

4. Any comments considered necessary by applicant must be submitted on later than the payment of the issue fee and to avoid processing delays should preferably accompany the issue fee. Such submissions should be clearly labeled, comments on statement of reasons for allowance.
